MOHAMED GABER

React Native/ React developer

jabrmhmd890@gmail.com | +201069579391 | 6th of October, Giza Governorate

PROFESSIONAL SUMMARY

React developer experienced in building full stack application from start to finish with appetizing UI, great UX, strong performance and security using industry standard up to date tech stach.

EXPERIENCE

CloseRead — chat analyser

App Store ↗ | Google Play ↗

- Built and shipped a cross-platform app with React Native and Expo that analyzes chat conversations and scores each person's effort, warmth, responsiveness and more.
- Integrated Supabase for authentication and Edge Functions, and RevenueCat for subscriptions that are checked on the server.
- Wrote a WhatsApp export parser that handles iOS and Android formats, different date formats by country, and zipped exports.

Wanas — dinner with strangers

App Store ↗ | Google Play ↗

- Built and shipped a cross-platform social dining app with React Native and Expo that connects strangers over shared meals.
- Developed a matching algorithm that automatically groups users into dinner parties, forming compatible tables without manual selection.
- Integrated Supabase for user authentication and file storage, managing signup/login and uploaded images (profiles/photos).
- Styled the full UI with NativeWind.

Hinty — AI guide/helper for video games

App Store ↗ | Google Play ↗

- Built and shipped Hinty, a cross-platform AI gaming-assistant app in React Native (Expo Router, React 19, Reanimated), backed by a Supabase/Deno serverless backend and Postgres.
- Integrated the Perplexity Sonar LLM through a secure edge-function proxy with multimodal image input, per-game context injection, and prompt guardrails that keep responses on-topic.
- Designed a freemium monetization system using RevenueCat subscriptions and a server-enforced usage limit, backed by an atomic Postgres RPC and row-level security, so quotas can't be bypassed client-side.
- Implemented authentication with Clerk (Apple & Google sign-in) with server-side JWT verification, plus a game database (IGDB) integration featuring cached Twitch OAuth tokens for search, trending games, and detail lookups.

Koligo — Social network manager application

App Store ↗ | Google Play ↗

- Built and shipped Koligo, a cross-platform personal-CRM app in React Native (Expo Router, React 19, Reanimated, NativeWind), backed by a local-first SQLite store synced to a Supabase/Postgres backend.
- Implemented authentication with Apple & Google sign-in and a freemium monetization model using RevenueCat subscriptions and a server-verified "Plus" entitlement to gate premium features, plus Sentry crash monitoring and EAS over-the-air updates for production releases.

Candlestick AI — Trading AI Helper

App Store ↗ | Google Play ↗

- Built and shipped Candlestick AI, a cross-platform AI trading-assistant app in React Native (Expo Router, React 19), backed by a Supabase/Deno serverless backend with EAS builds and OTA updates.
- Integrated OpenAI GPT-4o vision through a secure edge function proxy to analyse user captured chart screenshots, returning structured insights: trend, support/resistance, a strategic game plan, and a 7-section deep-dive on price action, momentum, and risk/reward.

EDUCATION

Bachelor of Computer Science — **Jan 2019 - Mar 2023**
Arab Academy for Science and Technology

SKILLS

- TypeScript, JavaScript
- HTML/CSS
- React Native
- Supabase
- PostgreSQL
- SQLite
- Clerk
- Git
- Expo, EAS
- Nativewind, Tailwind
- LLM/AI Integration
- Communication
- Deployment
- REST API
- Redux
- SQL
